THE PRINCIPLES OF:

3 POINT FIXATION

Hip Fix™ uses a unique 3 point fixation (crista iliaca and sacrum) to make the strong stability of the patient positioning match the surgeons need for space and manoeuvrability in the surgical field.

THE HIP FIX™

MADE IN DENMARK

Total hip replacement is a demanding and exacting surgical technique. Advances in technologies, new materials, and biomechanics have made it increasingly important for the orthopaedic surgeon to be able to accurately orientate the implant components in a reproducible fashion.

- Abdomen free from external pressure during procedure.
- Accurate and reproducible patient and component orientation
- Stability of patient position throughout procedure
- Hip Fix™ facilitates accurate and reproducible positioning of implant components

Hip Fix™ has more than 20 years of clinical history.

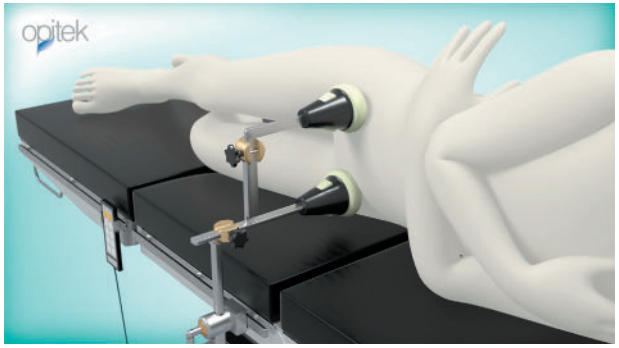

THE SINGLE USE PADS

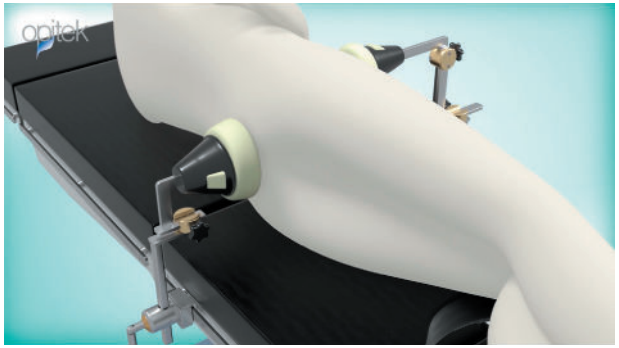

They are latex free and tested free from allergy inducing content.

THE SINGLE USE PADS

No risk of cross contamination, safe, hygienic and simple. Plug & play with all models of Hip Fix™
